

PRODUCTIVITY QUALITY INC OGP USER GROUP

Wednesday, June 25th

8:30 – 3:30

It's been a while since our last OGP User Group meeting, thanks to our massive, seemingly interminable construction and remodeling project. The dust has settled now and life has returned to normal. Our new, bigger and better meeting room is ready for use—and so, you'll be happy to know, is our new, bigger and better men's room.

Chuck Marks from OGP will be on hand to fill you in on some new software options as well as new developments in MeasureMind V14, MeasureX V3, SmartProfile, SmartTree Editor, and SmartFeature.

New SmartScope Specialist 300

The new SmartScope Specialist offers high precision and low measurement uncertainty. Geared for medical applications, the Specialist is part of the 300/302 range. You'll meet this new member of the OGP family in person.

After our usual free lunch we'll have some time for your questions and our answers following which we'll break out into smaller special-interest groups (listed at right). Pick your topic and let us know which one you're interested in when you register.

This promises to be an information-packed meeting. We hope you can make it. Mark your calendar now—and register soon.

Help us help you.

We want these User Group meetings to be genuinely useful to you and as relevant to your measurement applications as possible. We'd like to hear about real-world questions, issues or problems that have cropped up as you use your OGP hardware or software.

You may submit your questions through our online registration form at eseminar.pqi.net, or send them separately to sales@pqi.net.

Every attendee who submits a question will receive a valuable OGP souvenir.

TO REGISTER

Register online at www.eseminar.pqi.net
or Email sales@pqi.net
